BAFFLE SEAL

KUKIL INNTOT is a professional manufacturer of gasket, packing coupling with the latest technology not only for the plant but also the plant maintenance and emergency repair.

Product Reference :

K/# LBS SEAL

Description :

Baffle seals are seals for sealing longitudinal baffles in heat exchangers, and are mainly used in construction filters and heat exchangers with gaps due to repair and distortion. It consists of 1 Holder and 4 Lamella, which are all made of metal and made of SS316 Ti to maintain high strength. (Other materials can be manufactured according to the customer's request.) It is easy to assemble and requires no bolts to mount, making it very convenient to use.

Construction :

Applications :

Shell & Tube heat exchangers.
Heat exchangers with two-pass or split process flows with in the shell.
Reduce the clearance between the shell and the transverse baffle plates.

Availability :

Gasket Size : Order based
Thickness : 0.5t (Holder) / 0.2t (Lamella)

Remark :

- The specification of product is written by manufacturer, and it is changed frequently.
